

ASSIGNMENT 2

Team ID: **PNT2022TMID52302**

Project Name: **Gas Leakage monitoring & Alerting system for Industries**

Submitted by **DINESH S N (963519106018)**

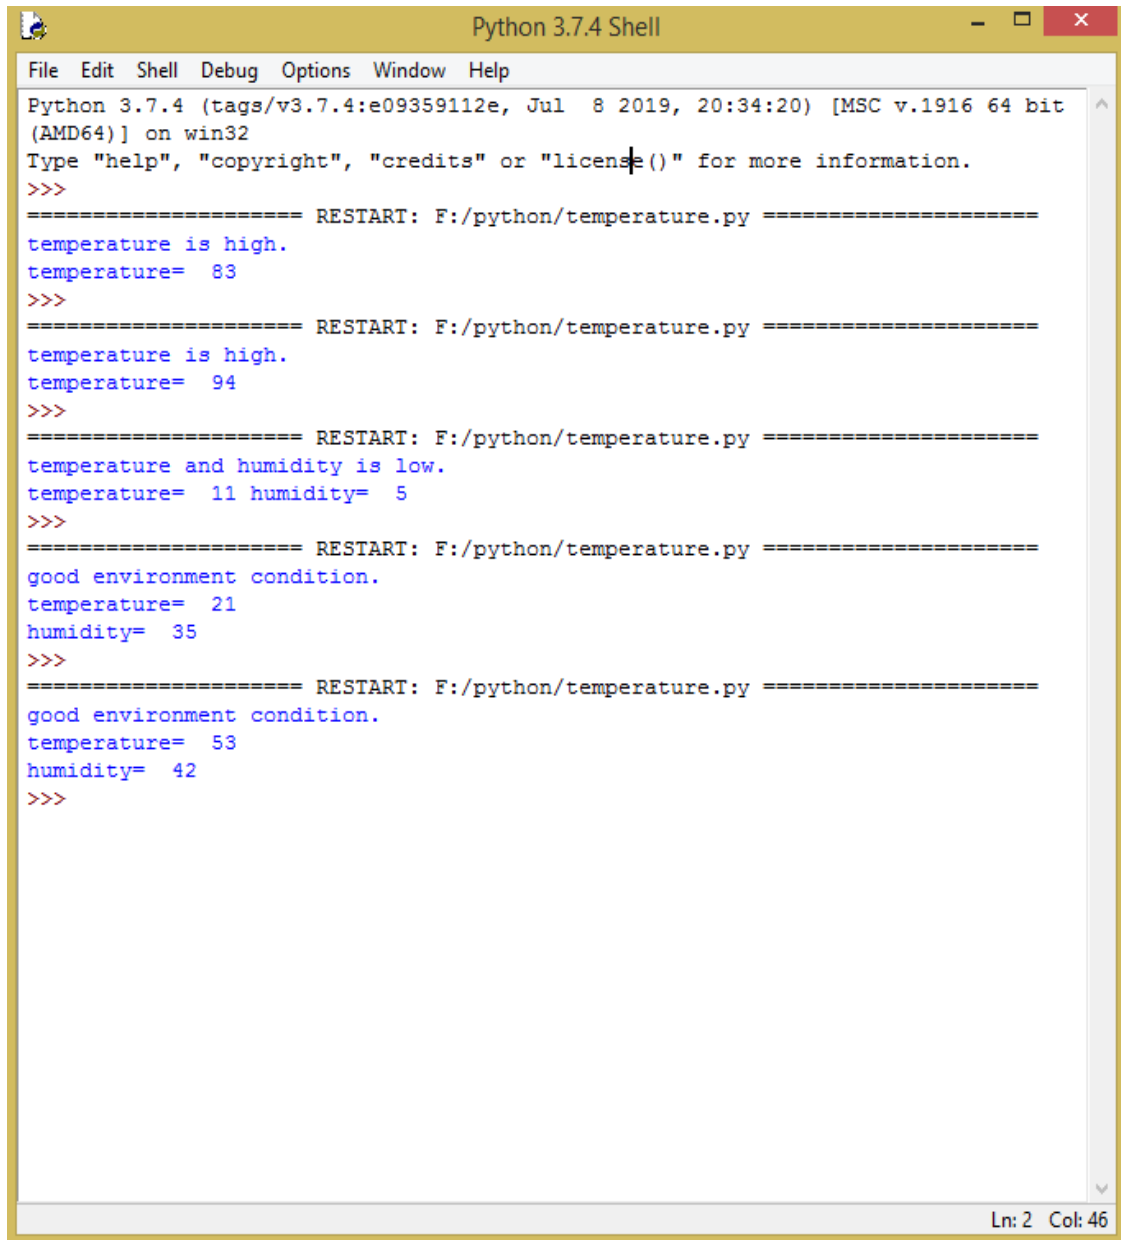

QUESTION: *Build a python code, Assume u get temperature and humidity values (generated with a random function to a variable) and write a condition to detect an alarm in case of high temperature continuously.*

Solution Code:

```
from numpy import random

a = random.randint(100)
b = random.randint(100)
def environment(x,y):
    if(x>=80):
        print("temperature is high.")
        print("temperature= ",x)
    elif(y>=60):
        print("humidity is high.")
        print("humidity= ",y)
    elif(x<=40)&(y<=30):
        print("temperature and humidity is low.")
        print("temperature= ",x,"humidity= ",y)
    else:
        print("good environment condition.")
        print("temperature= ",x)
        print("humidity= ",y)
environment(a,b)
```

OUTPUT:

```
Python 3.7.4 Shell
